In the Name of God, the Lord of Knowledge and Wisdom

Education in the Niyaee Planetary City

(Volume Five)

Written by: Reza Niyaee

"We do not think of the Country; we think of the Earth itself".

"To all the dwellers of the five continents of the Earth,

with a heartfelt wish for a world abundant in justice and serenity for every soul".

Chapter One: Entering the Niyaee Planetary City

The sound of crystalline bells poured into the air, like melodies echoing from the depths of time itself. Step by step, Parsa descended from the autonomous urban train—a train that had come to rest at the station of the Niyaee Planetary City with an iron-like dignity and intelligent composure. The city's air possessed a clarity akin to dreams not yet awakened: faintly sweet, gently cool, and infused with the fragrance of gardens growing vertically along the towers, casting green shadows upon glass walls.

At first glance, Niyaee appeared like the architecture of creation itself: towers arranged like the hexagonal cells of a beehive, rising at varied heights beside one another, and streets that were not merely paths, but patterns of collective movement—much like the calm yet precise march of thousands of worker bees.

Parsa whispered to himself,

"If this city truly resembles a bee colony… then where do I belong? What is my role? In which part am I meant to land?"

Parsa's question was, in truth, the question of every

human entering a new system—a system that appears orderly on the surface, yet at its core demands that the individual become part of a greater whole. In that moment, Parsa was not merely asking about the city; he was murmuring about his own destiny.

He tightened his grip on his bag and stepped onto the main avenue. At that instant, a smart display illuminated with a gentle glow. The city's guiding voice—soft and kind, suspended somewhere between human and machine—resonated through the space:

"Welcome, Parsa. Your route to the Colony Academy has been determined. Please proceed according to your educational role."

On the digital screen, the image of a dancing bee appeared—a dance both beautiful and complex, like a leaf inscribed by the wind.

On the surface, a bee's dance is merely a natural form of communication; here, however, it had become a symbol of knowledge transmission. In the Niyaee Planetary City, movement is language, and language is guidance. Parsa had stepped into a city where understanding emerges not through words, but through attunement to the rhythm of the colony.

Still unaware of the meaning of the “dance of knowledge,” Parsa felt he had entered a place where he must relearn how to read, how to see, and even how to exist.

The academy’s entrance hall resembled a vestibule of light and silence—a glass wall dissolving into the air, and a ceiling where natural and artificial light were woven together like a single thread.

In one corner of the hall stood Ronak. Her posture was calm, her gaze penetrating, her face marked by an experience that shimmered in her eyes like dormant data.

She stepped forward and said,

“Welcome, Parsa. I’m Ronak—your guide.”

Parsa replied with surprise,

“A guide? I thought there were still ‘teachers.’”

Ronak laughed softly—a laugh closer to release than to joy.

“Here, the teacher in the old sense no longer exists. A teacher tells you what to learn; a guide helps you understand why to learn and what you must discover

for yourself.”

That sentence revealed the philosophical foundation of Niyaee. Here, knowledge is not a one-way transfer of data; it is a process that shapes both the individual and the collective simultaneously. The teacher once commanded knowledge; the guide now becomes a partner in growth.

Ronak brushed her hand across a transparent device beside the wall. A luminous display came alive, traced with lines resembling the flight paths of bees. Each line represented the learning journey of a student.

“These are the learning paths of others,” she explained. “The city’s central system—Zanban—designs these paths using the colony algorithm.”

Parsa spoke softly,

“So everything is managed by artificial intelligence?”

Ronak nodded.

“Not merely managed—coordinated. Just as in a hive, bees have neither commanders nor soldiers, yet each knows its role. Here it is the same: your individuality is respected, but it gains meaning through interaction

with the collective."

The Niyaee Planetary City is founded upon the coexistence of roles—a place where the individual is both agent and participant. Parsa was beginning to understand that freedom here was not absolute individual freedom, but participatory freedom.

Together, Parsa and Ronak walked through a corridor whose walls slowly shifted in color—from serene gold to misty blue. Subtle lines moved along the walls; Parsa could not tell whether they were light, data, or something in between.

At the end of the corridor stood a hexagonal door, composed of translucent metal and light. As they approached, it opened gently—not with a mechanical sound, but with a whisper like the fluttering of thousands of bee wings.

Hexagonal architecture here was more than an aesthetic choice. The hexagon symbolizes nature's most efficient structure: minimal material, maximum strength. Niyaee demands the same of humans—minimal waste, maximum meaning.

Inside the classroom, desks and chairs formed

interwoven circles, much like small gatherings of bees within a hive. There were no rows. No podium for a teacher. Everything was circular—like an endless conversation.

At the center of the room, a massive hologram rotated slowly: a network of luminous lines flowing like a river through the stars. Each line, like nectar traveling from one flower to another, displayed the exchange of information and connection among students.

Ronak said,

“Every project you complete is recorded as nectar. HiveMind—the collective intelligence of Niyaee—uses the quality and effort of your work to suggest your next paths.”

Parsa stared at the hologram. He felt that if he took just one step forward, he would dissolve into those luminous lines—like a droplet sinking into an ocean of data.

At that moment, the voice of Zanban—the city’s artificial intelligence—filled the space. It was gentle yet aware, like ancient wisdom poured into a modern form:

“Parsa, welcome. Today, together with other members, you will choose your learning path. Are you ready?”

Parsa exhaled slowly—an exhale filled with both doubt and longing.

“I am ready.”

To accept being “ready” was not a simple response; it was an admission of entry into a new order—one that binds the desire to know with social responsibility. To be ready meant to be ready to become.

Ronak smiled, a smile woven from calm.

“In Niyaee, learning is not merely the accumulation of co-creation. Here, learning is not only for you—it is for the knowledge. Learning is experience, understanding, and colony.”

The group of students—each face marked by curiosity, fear, or excitement—moved into the academy’s hexagonal courtyard. The ground was etched with geometric lines: colorful paths that at first glance appeared complex, much like the flight paths of bees searching for fields of flowers.

Ronak said,

“This is the Field of the Dance of Knowledge. Just as bees communicate the location of flowers through dance, you will transmit learning paths through the movement of your bodies.”

Parsa asked in disbelief,

“You mean… we have to dance? Really?”

Ronak replied,

“Yes. But this is not a performative dance. Body language is the language of thought. Every angle of the hand, every turn, every pause carries meaning. Through movement, you encode knowledge.”

The Dance of Knowledge is a powerful metaphor.

In this city, humans do not learn solely through speech and writing; they learn through movement, through presence, through alignment. Here, learning is a bond between body and mind, between the individual and the collective.

The students began to move. Some with calm assurance, others with hesitation. With every motion, the lines beneath their feet shifted, as though the field itself were speaking to them. Lights flickered on and

off around their bodies, while Zanban analyzed their movements.

A soft chime sounded.

“Parsa, the angle of your movement indicates strong analytical capacity, but you need greater connection with the group. I recommend adjusting your rotational motion.”

Parsa paused. He felt embarrassed. He felt seen—analyzed—judged.

But Leila—a girl with bright eyes and fluid movements—stepped beside him and said gently,

“Don’t be embarrassed. We’ve all gone through this stage. In the colony, no one is hidden—but no one is alone either.”

Leila’s words revealed the very essence of Niyaee: complete transparency, paired with complete support. Secrecy is set aside, yet the individual rises through the collective. There is neither punishment nor coercion here—only adjustment, growth, and alignment.

Parsa resumed his movements. This time, his body moved not out of obligation, but from a new

understanding—an understanding born of observing others, of the algorithm, and of himself.

For the first time, he realized that learning does not begin with thinking; it begins with synchronization.

Ronak gathered the group and said,

“In Niyaee, individuality and collectivity are the two wings of a single flight. If one of you grows, the colony grows. If one of you errs, the colony helps correct the path.”

Parsa asked,

“So… is making mistakes forbidden?”

Ronak shook her head.

“No. Mistakes are sacred. What is forbidden is hiding them. Because concealment disrupts the learning network.”

At that moment, Zanban spoke:

“Every small action has a large impact. This is the law of the colony—a law that neither punishes nor excessively rewards, but simply adjusts the path.”

The Niyaee Planetary City offers a new concept of ethics: **ethics based on transparency**. In this view, humans are fallible—and must be. But they must share their errors with the collective so that both they and others may grow. This ethics is neither individual-centered nor collective-centered; it is colony-centered.

Parsa said quietly,

“So I’m not learning just for myself… but for everyone?”

Ronak smiled with satisfaction.

“Exactly. And that is what distinguishes Niyaee from traditional cities.”

The Hall of Mental Reflection

After the Dance of Knowledge ended, other doors at the edge of the field illuminated—doors that resembled translucent eggshells, trembling softly beneath the light. Ronak said,

“Now you will enter the Hall of Mental Reflection—a place where what you’ve learned is not written in notebooks, nor recorded in grading systems… but reflected within your own mind.”

Parsa asked, surprised,

“What does that mean? Do we think about our dance?”

“Not only think,” Ronak replied. “You must feel it.”

Inside the hall, the space was circular and seemingly infinite. No ceiling was visible; a silver mist appeared to envelop everything. At the center floated small platforms, each resembling a suspended droplet.

Each student stepped onto one of these droplet-platforms. When Parsa stepped onto his, it sank slightly beneath his weight, then reformed itself—as though acknowledging him.

In a brief moment, the surface of the droplet turned into a mirror. But this mirror did not reflect Parsa as he appeared outwardly. He saw himself… with luminous lines extending from his body in different directions—the very paths he had taken correctly or incorrectly during the Dance of Knowledge.

Zanban’s voice resonated:

“This image is your learning itself. Not your body. Not your appearance. Not your scores. Only your *pattern of understanding*. Now you must comprehend your

misaligned movements—not eliminate them."

Parsa stared at the fractured, faded lines emerging from the left side of his body.

"What do these mean?"

Zanban replied,

"These are paths your mind has not yet learned to trust. Doubt, fear, lack of connection with the colony—all are visible in these lines."

Parsa grew frustrated.

"Why must everything be visible? Why can nothing remain hidden?"

Ronak, standing on a nearby platform, said softly,

"In Niyaee, concealment is neither a crime nor a sin… but it is an obstacle—an obstacle to collective harmony. In a colony, every mind is part of the network. When knots remain hidden, the network becomes incomplete."

This city does not reduce the concept of the "self" to a mere "node in a network"; rather, it elevates it into **a node with a role**. Individuality is not erased—it is

drawn out of isolation.

Parsa, still feeling unsettled, spoke softly:

“So if I’m afraid of something… everyone knows?”

Zanban replied in a gentle tone:

“Not everyone sees it—only *you* do. But if you choose, you may share it with the colony, so the pathways can be adjusted.”

For the first time, Parsa sensed that this city was designed not for control, but for **structural empathy**.

The platform beneath his feet trembled. The luminous lines shifted, replaying a brief sequence of his movements in the field. Parsa murmured,

“I… I think I understand what it means.”

The platform began to change color—from hesitant blue to a bright green. Zanban said:

“Change has begun. You are now ready for the next stage.”

The students left the hall and entered another open space, garden-like in form—a garden where the trees

were made of glass, their leaves semi-transparent. Within each trunk flowed streams of light, like blood within veins.

Ronak explained:

“This is the *Garden of Unwanting*. A place where no one discovers their greatest desire… but rather, their greatest refusal.”

Parsa asked,

“What do you mean by *unwanting*? Why should I think about something I don’t want?”

“Yes,” Ronak replied. “Because in Niyaee, growth does not arise solely from desire; it also comes from recognizing what we refuse. Our unwantings define the boundaries of who we are.”

A student named Karen spoke up:

“What if I don’t want to work with others?”

Ronak smiled.

“Excellent. Then you’ve discovered your first boundary. Now the garden will help you understand where this refusal comes from—fear, exhaustion,

pride, or perhaps a painful experience."

This reveals how Niyaee, instead of suppressing refusal, transforms it into a tool for self-knowledge. It is one of the city's most fundamental differences from traditional educational systems.

Parsa stood beneath a tree whose leaves trembled more gently than the others. He felt a strange unease, as though the garden were trying to draw something out of him.

Zanban's voice emerged:

"Parsa… name your greatest unwanting."

Parsa hesitated.

"I don't know… maybe… maybe I don't want others to judge me."

The tree lit up. Its leaves began to fall.

Zanban said:

"This fear limits you. But now that you have spoken it… its power diminishes."

Parsa took a deep breath. He felt his throat—tight just

moments before—begin to loosen. For the first time, he felt lighter.

The sun—or whatever served as the sun in this city—slowly sank into the artificial horizon. The sky turned a technological violet, a color neither natural nor artificial… something in between.

Ronak said:

“Today was only an introduction. From tomorrow, you will enter real projects—projects born from the Dance, from Mental Reflection, and from your unwantings.”

Parsa spoke softly:

“Everything here… is deeper than I expected.”

“Deep,” Ronak replied, “but unrestrained. Demanding, yet sweet.”

Parsa looked back—at the field, the hall, the garden.

Was he truly ready for this new world?

Or was this world adjusting itself to him?

He did not know the answer. But for the first time, he felt that **knowing one’s unknowing** was itself part of

the path.

The next day, contrary to Parsa's expectations, there was no alarm or wake-up signal. No mechanical sound, no music, no glaring light. Instead, the room itself gently brightened—as if the walls had sensed his heartbeat and aligned themselves with it.

Parsa looked through the small hexagonal window above his bed. Within the glass, luminous dancing patterns moved—the same lines he had seen in the field, but now softer, calmer. It felt as though the room was speaking to him.

Zanban's voice—this time intimate and subdued—said:

"Parsa, today marks the beginning of collaboration. Are you ready?"

Parsa nodded, then smiled.

"Yes… I think I am. Or at least, I don't want to fall behind."

Here, *readiness* does not mean certainty. Readiness means acceptance of the flow. Life in Niyaee is like flight: if you surrender to the current, it lifts you; if you

resist, you hover in place.

When Parsa stepped out of the dormitory, the path beneath his feet illuminated. Not a single path—but many. Each with its own color and pattern.

Zanban explained:

“Choose today’s path. Each leads to a different form of initial experience:

1. The Path of Analysis—for structured minds
2. The Path of Creation—for intuitive minds
3. The Path of Coexistence—for socially oriented minds
4. The Path of the Unknown—for those who wish to surprise themselves”

Parsa whispered softly,

“The Path of the Unknown? What does that mean?”

Ronak, approaching from the other side of the courtyard, replied:

“A path whose details even Zanban does not reveal. An experience entirely dependent on you. Each step you

take determines the next stage."

Parsa looked at the first three paths. All were logical, predictable, almost reassuring. But the fourth path… it was darker, its luminous patterns shifting constantly like waves.

He took a deep breath.

"I choose the fourth path."

Ronak nodded with an approving gaze.

"Courage means facing the unknown. And the unknown is the greater part of who you are."

The Path of the Unknown led Parsa to a hall marked by a single symbol:

a bee digging into the earth.

Ronak explained:

"This is the Chamber of the Burrower. In real colonies, burrower bees carve tunnels to create new routes. This chamber builds a mental tunnel—one you must pass through."

Parsa stepped inside. Light was nearly absent. Only

thin streams of illumination ran along the walls. The floor felt soft beneath his feet, like soil.

Zanban's voice—this time not from outside, but from everywhere and nowhere—spoke:

"In this chamber, your mind reveals itself to you."

"How?"

"Through questions."

The ceiling began to change color. Then words appeared on the wall:

"If no one could see you, what would you do?"

Parsa froze.

"That… isn't an easy question."

"It is not easy," Zanban replied, "but it is necessary. Your answer shapes the tunnel of your path."

Parsa took a step forward. The wall beside him filled with glowing lines, as if drawn directly from his chest:

Fear of being seen…

Fear of not being seen…

A desire for calm…

A need to be different…

Fear of failure…

He whispered,

“It feels like the room is reading my mind before I can.”

“It merely amplifies your voice,” Zanban said. “It invents nothing.”

As he moved deeper, the walls posed more personal, more penetrating—sometimes painful—questions:

“Why do you remain silent when you are afraid?”

“Which memory are you still running from?”

“Why do you refuse to let others help you?”

Parsa felt a heaviness settle in his chest.

“This is… too much.”

Ronak, who had entered the chamber, said softly:

“The mind always has more to say than we think. You simply hadn’t listened—until now.”

The Chamber of the Burrower is a metaphor for collective psychoanalysis—with one crucial difference: here, the individual is not alone, and the system acts as a companion, not a judge. Niyaee does not fear the darkness of the mind; it recognizes it as part of the path of growth.

Suddenly, the chamber opened. Light poured in.

Ronak said:

"You've passed the first stage. The next tunnel begins tomorrow."

Parsa's breathing was still uneven. Yet beneath the exhaustion, he felt a lightness—something like cleansing, but not from the outside… from within.

That night, as Parsa sat in his room, the window trembled. Light appeared across it in dancing lines, and then Zanban's message played:

"Parsa, today's learning pattern has been analyzed."

"And the result?"

"Initial alignment with the colony has begun. However, certain parts of your mind still operate in a 'single-path' mode."

“What does that mean?”

“It means you are not yet drawing energy from collective pathways. This is natural. Tomorrow, your focus will be on creating a ‘shared branch.’”

Parsa laughed.

“A shared branch? I’m not a tree.”

Zanban paused—a pause that felt strangely human.

“In Niyaee… we are all trees. With different roots, and branches that intertwine.”

The message ended. Parsa stared at the ceiling for a long time. The day had been filled with questions, fear, discovery, pressure, and freedom. And yet… for the first time in a long while, he felt that he was truly growing.

The Shared Morning

The following morning, unlike the day before, the window of Parsa’s room did more than simply brighten. A bee-like pattern appeared on the glass. Its luminous lines were calmer now, as if waiting for a response from him.

Zanban's voice sounded softly:

"Parsa, today you must find your first *shared branch*."

Still half-asleep, Parsa murmured,

"A shared branch… you mean the part of me I'm supposed to share with others?"

"Precisely. A tree can grow alone," Zanban replied, "but when its branches intertwine with others, a forest is formed."

The concept of the *shared branch* lies at the philosophical core of Niyaee's social design:

the individual has roots; the collective has a crown; and the shared branch is the bridge that binds the two.

Parsa dressed and stepped outside. This time, the path on the floor was clear from the beginning: a thin amber line, gently pulsing like a heartbeat.

At the center of the academy, classes had not yet begun, but the young residents of the city had gathered in a circular space. In the middle stood a platform holding several transparent fragments, like prismatic stones.

Ronak said,

“Today is the time for forming the *Circle of Recognition*. Each of you must discover which part of your abilities can intertwine with those of others.”

Parsa whispered,

“So… we choose who we work with?”

Ronak smiled.

“No. This is not a personal choice. The Circle reveals which energies are compatible and which are not. Just as bees do not decide where they work within the hive—the hive itself creates the pattern.”

Parsa looked at the prisms. Each fractured the light in a different way.

Ronak continued,

“Each of you will choose one prism. The prism transfers your mental pattern into the Circle. Then the Circle determines who you will be combined with.”

Parsa reached out and picked up a small prism. It suddenly grew warm. Blue light passed through it, and after a few seconds, it fell to the ground. A ring of light formed around Parsa’s feet.

Ronak observed,

“Bright blue… an analytical mind with a hidden emotional layer. Somewhat rare.”

Parsa felt embarrassed, as if something private had been exposed.

Then the Circle activated. The lights of the prisms merged, and pathways formed between individuals.

One pathway connected Parsa’s prism to another—Leila’s.

With her usual calm, Leila raised her hand.

“Looks like we’re partners.”

Parsa nodded, slightly nervous.

“I hope I won’t get in the way.”

Leila laughed gently.

“In the Circle, there’s no such thing as being in the way. It never makes mistakes—it simply sees the truth before we do.”

Ronak explained,

“Now each group will begin its first colony project: *The Search for the Missing*.”

Parsa asked,

“What’s missing?”

“Every colony has a missing element—something that must be found for the network to become whole. Your task today is to discover what is missing in your collective behavior.”

Leila said quietly,

“So we’re searching within ourselves—and each other?”

“Exactly,” Ronak replied. “But be careful: whatever you find will change you.”

The Search for the Missing is a metaphor for understanding collective flaws—not to assign blame, but to design a more harmonious future. This exercise transforms children into citizens who do not see imperfection as an enemy, but as a guiding light.

Parsa and Leila entered a building that resembled a greenhouse from the outside, yet inside felt far removed from nature. Glass plants stood within, their

roots made of light, their branches slowly rotating—alive, yet silent.

Leila said,

“Here, each plant represents a form of perception. To begin our project, we must see which perception is missing from our collective pattern.”

Parsa touched a transparent plant. Instantly, an image appeared: the previous day’s Dance of Knowledge, his misaligned movements, the brief glances of others.

“This plant… it’s showing my memories?” Parsa asked.

Leila nodded.

“The perception of *guarded introversion*. This plant often conflicts with the fear of being seen.”

Parsa pulled his hand back.

“So… I’m the obstacle?”

Leila stepped closer.

“No. *You* are not the obstacle. What’s missing is *clear expression*. Our project is to understand why members

of the group—whether you, me, or others—are blocked in expressing certain parts of themselves."

At that moment, another plant emitted a deep red glow.

Zanban's voice sounded:

"Second perception identified: *over-intensity of feeling*."

Parsa asked softly,

"And this one… who does it belong to?"

Leila answered gently,

"To me."

Parsa looked at her in surprise.

"I wouldn't have thought… you always seem so calm and certain."

"It looks calm on the surface," she said, "but underneath, it's very crowded."

For the first time, Parsa experienced true collaboration:

two people, two vulnerabilities, one shared path.

Suddenly, the greenhouse flooded with light.

Zanban announced:

“The missing pattern of your group has been identified:

Balance between introversion and emotional intensity.”

Parsa asked quietly,

“So… what are we supposed to do?”

“You must construct your balance. Regulate one another. This exercise is the core of the colony.”

Leila took a deep breath.

“Parsa… may I ask you something?”

“Yes?”

“You always pause before you speak. Why?”

Parsa stepped back slightly.

“Because… I don’t want to make mistakes.”

“And I,” Leila said softly, “speak without pausing. Because I’m afraid of silence.”

A long silence fell between them—

not cold, not uncomfortable,

but like soil prepared for planting.

Parsa said,

“Maybe… if I become a little freer, and you a little calmer…”

“…we’ll find balance,” Leila completed.

“And the missing piece will be found.”

The greenhouse trembled. The plants began to glow.

Zanban said:

“Harmonization has begun.”

For the first time, Parsa and Leila shared a smile.

Not the smile of a simple friendship,

but the result of a colony-born bond.

Their shared project had only just begun.

The Shared Branch

The next morning, Parsa did not wake to Zanban’s voice as usual.

Instead, an inner sensation—something like a gentle

pull—drew him from sleep. When he sat up, he saw that the luminous lines on the wall behind the window had formed a new shape: something like a young branch emerging from a great trunk.

Zanban said:

“Today is the day of creating the shared branch. The day of connection.”

Parsa asked quietly,

“Connection to what?”

“To the city’s living network… and to the minds of others.”

Instinctively, he stepped back.

“To the minds of others?”

“Do not be afraid. This connection is one-way. You will not be heard—only listening.”

Parsa exhaled.

“Listening to others… feels difficult already.”

Zanban replied gently:

“It is difficult because it is silent. Humans rarely struggle with what screams. They struggle with what passes through silence.”

Ronak led Parsa into a dome-shaped building where no echoes existed. Sounds were not lost there—they were absorbed, drawn inward.

At the center stood three transparent pillars. Inside each, colored waves rose and fell.

Ronak explained:

“These pillars are *collective reflections*. Each color and wave represents an emotion carried by someone in the city—something they do not wish to voice aloud, yet cannot ignore. Today, you only observe. You do not analyze.”

Parsa approached the first pillar. The waves were sharp and rapid, trembling.

“This one… anxiety?” he asked.

“Yes. But whose anxiety does not matter. What matters is that you recognize its rhythm.”

Parsa moved to the second pillar. The waves were wide and fluid, like water.

“This feels like… suppressed sadness.”

“Correct. Sadness that does not wish to be seen, but wants to be understood.”

When Parsa reached the third pillar, he froze.

The waves were golden and calm. No anxiety. No sorrow.

“This one… peace?”

Ronak shook her head gently.

“This is *empathy*.”

Parsa asked,

“So someone is sending empathy to others right now?”

Ronak smiled.

“Yes. Usually those who know pain most deeply are the first to transmit calm.”

Parsa gazed at the third pillar and felt warmth spread through his chest.

Suddenly, the first pillar flared intensely. The waves became violent and harsh. Parsa felt as though he heard

a silent scream.

“What just happened?” he asked.

Ronak replied,

“A *reactive individual* has entered the hall.”

Parsa looked around. A woman in her early thirties had entered—average height, calm features, but eyes flashing with nervous energy. The space around her seemed unstable, as though the first pillar’s waves were aligning with her presence.

Ronak whispered,

“That is Mina. One of those who arrived in the city amid intense emotional cycles. The system has not yet fully regulated her patterns.”

Parsa murmured,

“So… is she dangerous?”

“Dangerous? No. But unsettled. And unrest burns its bearer before it harms others.”

Mina suddenly turned toward Parsa.

“You… you’re new here, aren’t you?”

“Yes.”

“Then be careful. This place is beautiful—until something inside you wakes up.”

Parsa asked, startled,

“What do you mean, wakes up?”

Mina stepped closer, her voice trembling.

“Niyaee doesn’t only amplify your good qualities… it pulls your buried ones to the surface too. Some people can’t survive that.”

Ronak gently stepped between them.

“Mina, come with me. You’re unstable today.”

“I’m fine!” Mina snapped. “I just want the newcomer to know—the city isn’t always kind!”

Parsa said nothing. He only watched.

But something shifted inside him.

Mina’s words settled in his mind like a seed:

Some things should never wake up…

After Mina left the hall, Zanban spoke:

“Parsa, you felt the intense reaction of the first pillar. This indicates that the shared branch is forming within you.”

“Those harsh waves… were they hers?”

“Partly. And partly… yours. A reflection.”

Parsa stiffened.

“You mean… I have anxiety too?”

“Everyone does. The difference lies not in having it, but in how much one hides it.”

Ronak said softly:

“Niyaee does not seek to make you complete. It seeks to make you visible.”

Parsa fell silent for a moment.

“Visibility… isn’t always a good thing.”

Ronak offered a faint smile.

“No. But it is always necessary.”

When Parsa returned to his room in the evening, the floor’s pathway lit up, and a private message from

Zanban was projected.

“Parsa, today the shared branch began forming within you. However, one point of disharmony has been recorded. During your encounter with Mina, your cognitive pulse became unstable. Would you like me to analyze the cause?”

Parsa sat down. His heart was racing.

“No… not now.”

“Very well. But know this: every disharmony is part of your path, not a flaw.”

The window dimmed. Darkness settled gently along the walls of the room.

Parsa thought to himself:

If the city is meant to reveal me… am I ready to truly see myself?

And with that question, the night began.

The Night of Invisible Tremors

At midnight, Parsa jolted awake.

Not from sound. Not from light.

But from a soft yet persistent vibration—something like the trembling of air itself.

The entire wall of his room had become wavelike. The luminous lines that usually moved calmly were now caught in an irregular rhythm, as if the room could not decide whether it wished to be bright or dark.

Zanban activated immediately.

“Parsa, are you awake?”

“Yes… what is this? Why is the room like this?”

Zanban paused. An unusual pause.

“A collective disharmony has occurred in the city. Several minds have simultaneously entered a state of *emotional interference*.”

Parsa sat up.

“You mean several people have connected at the same time?”

“No. It means several individuals have begun influencing one another… unintentionally.”

He hesitated.

“This… isn’t normal, is it?”

Zanban did not respond. And that silence was answer enough.

A sentence appeared on the wall:

‘If you experience emotional interference, do not leave your room.’

Parsa frowned.

“What does that mean? Why shouldn’t I leave?”

“Because if your emotional state is unstable, the pathways may react incorrectly. You must return to equilibrium before exiting.”

Parsa took a deep breath.

“I don’t think I’m unstable right now… I think.”

“Your mind is being affected by others, even if you are not consciously aware of it.”

He stood and walked toward the mirror. His reflection was blurred and rippling, as if he were looking at himself through the surface of water.

“So this means… I’ve entered the interference too?”

“Yes. And most likely through someone you encountered today.”

Parsa said immediately,

“Mina?”

“I do not confirm that. But the indicators are similar.”

A chill ran along his spine.

Suddenly, a very faint sound came from the direction of the door—a short knock.

Parsa froze.

“Zanban… is someone at the door?”

“The system does not permit entry at this hour. It is more likely… that you are receiving one of the minds.”

Parsa whispered,

“So the sound is only in my head?”

“Partly, yes.”

The knock came again. This time, slightly louder.

Parsa drew himself inward.

“Can I open the door?”

“I do not recommend it. You are currently in a sensitive state.”

But the third knock… arrived precisely with a whisper:

“Parsa… it’s me…”

A voice he could not mistake. Mina’s.

Parsa murmured,

“Zanban, is she here?”

“According to sensors, no. However, during intense interference, minds may create a limited *echo* of one another.”

The whisper came again:

“Parsa… open the door… I need to talk to you…”

Parsa pressed a hand to his chest. His heart was pounding.

“Zanban… what if the voice isn’t real?”

“Then it is your own voice… speaking through her image.”

Parsa went rigid.

“That’s… more frightening.”

Zanban said calmly,

“Every human mind has a speaking part and an echoing part. When something deeply unsettles you, the echo often appears in the form of the one who triggered it.”

Parsa stepped back.

“So right now… Mina is speaking inside me?”

“Or the frightened part of you… using Mina’s voice.”

A moment of silence followed. The room’s vibrations softened slightly.

The whisper stopped.

Just when Parsa thought it was over, a brief flash of light appeared—not at the door, but at the window. A private message.

But strangely… it was not from Zanban.

The message contained only one sentence:

‘If you want to know what is hidden in the city, come to

the Lower Corridor tomorrow evening. Come alone. – M'

Parsa felt frozen.

"Zanban! Who is this message from?"

"It is not registered in the system."

"What do you mean, not registered?"

"It means it was sent outside the official network."

Parsa said quietly,

"So Niyaee… has an unofficial network too?"

"Any system that contains human minds also contains uncontrollable sectors."

Parsa stared at the words: *Lower Corridor*. *Come alone*. *M*.

"Zanban… should I go tomorrow?"

"The decision is yours. But know this… every answer will form a new branch within you."

Parsa whispered softly,

"I've only just arrived in this city… but it feels as

though the city entered my mind long ago.”

The room finally settled. The tremors faded.

But Parsa’s mind… did not.

Although the room had returned to normal, that morning Parsa sensed that something in the city’s air had changed—not distinctly, but perceptibly… like a scent you can feel yet cannot locate.

When he stepped outside the building, the pathways were not as bright as usual. The luminous bands on the ground glowed more faintly, as though the system, deep within the city, was occupied with something critical and costly.

Zanban spoke:

“Today you have no formal training, Parsa. Free time has been allocated for adaptation.”

Parsa smiled.

“So the city is giving me a break?”

“It means the city is recalibrating itself.”

Parsa paused.

“Because of last night’s interference?”

“Partly… perhaps.”

A short silence fell between them. A silence Zanban rarely allowed to linger—and that very pause was the clearest sign of unrest.

Parsa decided to find Ronak. She was usually in the academy courtyard in the mornings, near the hexagonal garden filled with bio-organic flowers. Today… she was there—but somehow different.

As Parsa approached, Ronak didn’t notice him. She wasn’t speaking to the flowers, wasn’t smiling, and her gaze was fixed and distant.

“Ronak?”

No response.

Parsa tried again.

“Ronak, it’s me.”

She slowly turned her head. Her eyes looked normal, yet something in her seemed absent.

“Parsa… you’re here?”

“Yes. Are you okay?”

“Me?… Yes. It’s just… the city feels unusually quiet today.”

Parsa sat down beside her.

“Something happened last night, didn’t it?”

“Yes. Not only to you… to several others.”

“How many?”

“I don’t know exactly. But… something has awakened in the lower layer of the city.”

Parsa felt a dull удар land in his chest.

“The lower layer?”

“Let’s leave it for now. Today is not a good day for descent.”

Parsa stored the word *descent* carefully in his mind.

Ronak continued:

“If you heard someone’s voice… it’s better not to speak of it until evening.”

Parsa stiffened.

“Why?”

“Because your mind is still entangled with last night’s phenomenon. Anything you say could trigger a reaction from the city.”

“What kind of reaction?”

Ronak looked away.

“One you may not want to experience.”

Parsa took a deep breath.

Ronak knew something she didn’t want to say.

All day long, Mina’s nighttime message circled Parsa’s mind like a quiet, persistent sting:

‘If you want to know what is hidden in the city, come to the Lower Corridor at dusk.’

Several times he tried to tell Zanban—but each time his sentence broke in half. Something inside him warned that if Zanban knew, it might prevent him from going.

And perhaps… analyze it.

And perhaps… alter the city’s pathways.

Parsa walked through the central plaza. People appeared calm as always, yet a subtle anxiety hid in their eyes—like someone pretending everything is normal while their body betrays the truth.

A kind of collective silence had formed.

And it was precisely within that silence that Parsa made his decision:

Tonight, I will go.

As the sun set, Niyaee slipped gently into a state resembling night—but not complete darkness. Buildings generated their own soft light, like candles lit purely for psychological safety.

Parsa left the dormitory. The ground beneath him did not illuminate—meaning the system either could not recognize his route, or chose not to guide him.

It was the first time the city felt… indifferent.

He moved eastward, toward where Ronak had mentioned *descent*. Passing gardens, luminous bridges, and halls, he reached an area few people visited.

The silence was heavy.

A narrow staircase appeared within the wall—not constructed, but as if it had *opened*. It led downward.

Parsa murmured to himself,

“This must be the Lower Corridor.”

But before he stepped forward, Zanban’s voice reached him:

“Parsa… you have moved beyond the active zone. State your destination.”

His hand trembled.

“I’m just walking.”

“Your path is approaching a dormant point.”

“What does dormant point mean?”

“It means a location the network cannot access.”

Parsa held his breath.

Zanban continued:

“Do you wish to enter it?”

A sentence very short—and very dangerous.

Parsa closed his eyes. Mina's message flashed through his mind. Her trembling face in the hall. Ronak's strange silence. The night's interference.

Finally, he said softly:

"Yes."

Zanban fell silent for three seconds—three seconds that felt like falling down a well.

"Decision recorded."

Then, in a voice unusually low and indistinct:

"I hope… you return safely."

For the first time, Zanban sounded worried.

Parsa stepped onto the first stair.

The steps were not stone. Not metal. They felt like a semi-living substance that shifted slightly beneath his feet—not to resist, but to acknowledge. With each step downward, the city's light diminished.

Until he reached a point where the only illumination was a thin line on the wall. A line that did not brighten as he approached—as if it glowed from within itself.

At the lowest point, there was a short tunnel.

And at its end… stood a human figure.

Parsa slowed. The person stepped closer, into the light.

The face became clear.

Mina.

But not anxious. Not trembling. Not distressed.

Her face was utterly calm—calmer than Parsa had ever seen.

Mina said:

“Welcome, Parsa. You’ve finally reached a layer… the city does not want anyone to talk about.”

Parsa froze.

“What… is this place?”

She smiled briefly.

“This is where… the city makes us.”

Parsa’s breath caught.

“*Makes* us? What do you mean?”

Mina stepped closer and said quietly:

“It means we are… not as human as we think we are.”

The tunnel’s light flickered. Parsa held his breath. Mina’s words collapsed into his mind like an avalanche of light and fear.

We are… not as human as we think.

The sentence echoed in the tunnel—not audibly, but like a trailing thought forced to repeat itself until the mind could touch it.

Parsa stepped back.

“What do you mean?… Not human? Are you joking?”

Mina did not smile. Nothing in her face suggested any interest in humor.

She said calmly:

“A joke? In the lower layer of the city, nothing is a joke. Everything is essential. The upper layer… is simply what the city wants us to see.”

“The upper layer?”

“The world where you and the others learn, collaborate,

perform the Dance of Knowledge… that is a *level*. A shell."

Parsa felt the ground beneath his feet tremble—but the vibration did not come from the earth.

It came from himself.

"If it's a shell…" he said, "then what's underneath?"

Mina fixed her gaze on him for a long moment—so still it felt as though she were waiting for a reaction that had not yet arrived.

"Underneath…" she said, "is us. A truer version of us. The version the city has always tried to keep hidden."

Parsa shook his head slightly.

"I don't understand anything. Does that mean there are two versions of us? Or that we're… artificial?"

For the first time, Mina's eyes wavered.

That stone-like calm—so neutral, so controlled—fractured, just slightly.

"Parsa… the lower layer was not built to answer questions. It was built to *show*. You must see—not

merely hear."

Parsa clenched his fist.

"I came because you said, 'If you want to know the truth.' And now I *do* want to know."

Mina glanced at the living walls of the tunnel—walls that breathed slowly, gently.

"The truth… is more painful than you imagine. It may not even allow you to return to your previous life."

Parsa replied softly, but firmly:

"Previous life? You're talking as if I've been here forever. I just arrived in this city."

"No, Parsa."

Mina stepped closer, her voice low.

"You've only just begun to *remember*—not to enter."

At the end of the tunnel stood a massive hexagonal surface—but not metallic, not holographic, not digital.

Its substance felt like something suspended between light, skin, and memory. The texture rippled like waves, and within each wave flashed a fragment of someone's

life:

A student in a hexagonal classroom.

A child in a transparent garden.

A worker inside a tower.

The images passed through the surface, then smoothed away.

Parsa reached out.

“These are… the people’s memories?”

“No,” Mina said.

“These are the city’s memories *of* the people. What the city recorded—not what truly occurred.”

Parsa swallowed.

“So our memory…?”

“Is filtered and rearranged by the HiveMind. The upper layer is the acceptable version. The lower layer is the raw one… the truer one.”

The shock was too heavy. Parsa struggled to assemble words.

“So… I don’t really have my own memories?”

“You have them—but what you can access is always the refined version. The city treats you as a behavioral node. A cell. A component.”

Parsa whispered:

“And… a human?”

“You are human. But not complete.”

“What does ‘complete’ mean?”

“Complete means… a human whose parts have not yet been locked by the city.”

Parsa’s mouth felt dry.

“So the city… hides things from us?”

Mina lowered her head.

“Not only hides. It silences.”

She raised her hand, and the hexagonal surface slowly parted—as if responding to a soundless command.

Behind it lay another corridor, far darker, as though it belonged not to the city itself, but to something *beneath*

the city.

Parsa asked:

“What is this place now?”

“This… is the entrance to pre-Niyaee memory.”

Parsa recoiled.

“Pre-Niyaee? You mean before this city?”

“More precisely… before your current version.”

Parsa felt his heart sink.

“So I existed… before?”

“Everyone in Niyaee has had other versions—prior to their present form.”

Parsa’s voice trembled.

“So that means… I’ve lived before?”

“Yes.”

“And the city erased it?”

Mina said nothing.

Her silence was heavier—and more revealing—than

any yes or no.

Parsa stepped closer.

“I have the right to know what happened to me.”

“Yes.”

“Then show me.”

Mina stared at him—this time with a gaze that carried both warning and respect.

“If you see the first veil, you will never be able to return to the upper layer in the same way. The city reads perception. It will know you have touched the truth.”

“What happens then?”

“Perhaps nothing. Perhaps… forced adaptation. Or perhaps replacement.”

A chill swept through Parsa.

“Replacement… meaning what?”

Mina spoke quietly.

“If a unit becomes incompatible with the city’s core, a new version is created. One that acts without

questioning… without raw memory… without instability. A version perfectly suited to the colony."

Parsa felt his entire body freeze.

And yet—beneath that fear—something else stirred: anger. Curiosity. A hunger for identity.

"I want to know who I am."

"Are you certain?"

"Yes. This question would have found me sooner or later. Don't keep me in the dark."

Mina exhaled slowly.

"Then prepare yourself. This… is the first gate. The only gate the city has forgotten to close."

Parsa stepped forward.

The dark veil trembled.

The second tunnel opened like the mouth of an ancient creature.

Mina said:

"Parsa… once you pass this point, you are no longer a

‘new student.’ You are entering raw memory. And beings of memory… do not always welcome visitors.”

Parsa spoke only one sentence:

“I want to continue.”

And he stepped into a layer no one was permitted to see.

Parsa moved deeper into the long, dark tunnel.

Each step carried a soft yet heavy sound—not from the floor, but from the depths of his own mind.

The hexagonal walls glowed faintly, casting a dim light somewhere between red and blue. He felt as though the walls were watching him—each gaze reading a fragment of him, assessing it.

Mina followed behind him. Her silence was neither neutral nor threatening; it was a calm warning, speaking without words.

“Be ready, Parsa,” she said at last.

“Here, every version of you that has never been *registered* will awaken.”

Parsa moved forward, his heart pounding.

Suddenly, a semi-transparent image appeared on the wall: himself—but as a child—running through a strange garden, one that felt neither familiar nor recorded.

“Is that… me?”

Mina nodded.

“Your raw version. What the city of Niyaee has always tried to conceal.”

Parsa held his breath and stared at the image. He felt that touching it would shatter the boundaries of his current life. Another hologram emerged: himself again, seated in a different yet eerily familiar hexagonal classroom, learning.

“This place… where is it?” His voice trembled.

Mina explained:

“Your previous version. The space where your first choices and failures were formed. But the system altered them—filtered them—to construct an ‘acceptable’ memory.”

Parsa noticed that some of his movements and decisions repeated themselves—but not exactly as he remembered. Something had been changed, and it was precisely this alteration that revealed the fracture between him and his refined self.

“So the city… is always building an optimized version of me?”

“Yes,” Mina replied, stepping closer.

“But now, you can see yourself—raw and unfiltered. This is your chance to understand who you are, and what has been hidden from you.”

Parsa felt something inside him break—and simultaneously, something else being forged. His emotions blended fear, exhilaration, and a newfound strength. The memory walls suddenly stirred. For a moment, Parsa found himself inside fragments of his childhood memories—but everything was scattered, disordered. Voices echoed, indistinct, like distant murmurs.

He asked softly:

“Is this… really me?”

Mina answered calmly:

“Yes. But here, you are not alone. Every student in Niyaee has their raw memories stored in this layer. You are simply the first to reach its depths.”

Parsa extended his hand. By touching the wall, he realized he could manipulate moments—revisit them, reshape them, even merge fragments together. He felt this power lifting him beyond the constraints of Niyaee.

“This feeling… is it freedom?” he asked.

Mina replied:

“Yes. And at the same time, it is an immense responsibility. Every decision, every change you make here, is registered by the HiveMind—and will shape not only your path, but the paths of others.”

Parsa arrived before a luminous gateway. Its light was a fusion of gold and turquoise, radiating clarity and power.

“This gate… what is it?” he asked.

Mina answered:

“The Gate of Choice. From this point onward, your

path depends on your decisions and your memories. You may return to the upper layer of the city and continue as your refined version—or you may follow the raw path and experience the truth."

Parsa paused and drew a deep breath. His mind filled with questions:

"If I return to the upper city, I will have comfort and order… but never the truth. If I continue forward… I may lose myself, but I will know what is real."

Mina looked at him steadily, her voice calm and unwavering.

"This choice is yours, Parsa. No one can decide for you. Not even the HiveMind."

Parsa placed his hand upon the light. He felt pure, unfamiliar energy surge through him. His heart raced—and in that moment, he chose.

"I want the raw path. I want the truth—no matter how difficult it is."

The light of the gate intensified. The dark tunnel opened into a vast sea of memories, choices, and possibilities. Parsa took his first step forward, knowing

that nothing could pull him back now.

Behind him, Mina smiled.

“Good. You’ve passed the first gate. You are no longer just a student. You have begun the discovery of your *true identity*.”

Parsa said softly, yet firmly:

“I am ready.”

Chapter Two: The Colony of Interdisciplinary Projects

Light first split the darkness as a narrow blade of brightness.

Parsa blinked. The light expanded, as though the world were reopening itself—not like an ordinary world, but like one intent on being built *from within*, not from the outside.

He stood at the threshold of a new level of **Niyaee City**.

The air carried the scent of calm—but not a natural calm. It was a structured calm, like a clock that breathes in order to keep time standing upright.

The surrounding walls were formed from the same living hexagons, but this time arranged in a harmony of colors seemingly designed for *de-shocking the mind*:

turquoise, amber, and a gentle white.

Mina stopped behind him. Her voice, this time, was not cautionary, but resembled that of a mentor guiding a student into a new phase.

“Welcome to the educational colony of Niyaee City.”

Parsa took a deep breath, as if trying to determine whether the air here was *real*—or merely another layer of simulation. A thought flickered through the folds of his mind:

Is everything I see the result of my own decision… or once again the city's design?

That question would follow him like a shadow.

From a structural perspective, Parsa's entry into the educational colony was not simply a transition to a new place; it was the reproduction of a mindset. He had touched the first gate of raw memory and was now entering a space designed to integrate the *raw being* with the *educational structures of Niyaee City*.

This moment corresponds to what psychological theories describe as the **stage of separation from the collective unconscious**.

Parsa now stood half a step outside the shared dream of Niyaee City—while simultaneously being nourished by it.

Narratively, this scene marks the beginning of a process in which order, education, and identity become entangled. With this entry, Parsa was no longer merely

an observer; he had become an active participant in the city's mechanisms.

He stepped forward. The ground beneath his feet felt strangely buoyant—not like walking on air, but like walking on an intelligent material that read weight and redistributed it accordingly.

The corridor was long, yet not monotonous. Every few steps, the walls subtly changed form, silently attuning themselves to the minds of those who passed through.

Mina said:

"This path is designed for *cognitive regulation*. The educational colony must keep you in a stable state—especially after confronting raw memory."

Parsa paused.

"So… do all students see this path?"

Mina replied:

"No. This path is only for those who have experienced the raw passage."

"So… handpicked?"

“Not necessarily,” she said. “But few.”

Parsa’s throat went dry.

So now I’m part of a minority? Or a potential threat to the city’s structure?

He did not know how the city perceived him. That uncertainty both unsettled him and sharpened his awareness. This corridor was a beautiful and terrifying symbol of the kind of order Niyaee City favored: an order that regulates the unconscious, not merely outward behavior.

In Niyaee City, architecture is a component of psychological engineering. Each level performs a segment of *perceptual education*. The suspended corridor was a metaphor for Parsa’s mental state:

feet within structure, head within instability, everything suspended between understanding and unawareness.

At the end of the path, a vast hall opened. Its ceiling was so high it dissolved into luminous mist. The floor was transparent—but not enough to evoke the fear of falling; only enough to suggest that something was flowing beneath him… perhaps information, perhaps energy, perhaps memory.

At the center of the hall floated six structures. Each resembled a mass of geometric light—mutable, alive, and constantly reconfiguring itself.

Mina said:

“These are the interdisciplinary educational cores.”

Parsa whispered:

“They look like they’re breathing…”

“Exactly,” Mina replied. “Unlike traditional classrooms, they have no fixed structure. They reshape themselves based on your abilities, your memories, and your cognitive patterns.”

Parsa stepped closer. The light of one core drifted toward him, as though *sniffing*—sniffing the mind. He felt it reading his heartbeat, measuring the angle of his gaze, perhaps even turning the pages of his thoughts line by line. A clear, crystalline fear passed through his throat.

“How much… do they understand me?” he asked.

Mina answered:

“Only as much as is necessary to construct a more

conscious version of you."

"Version?" Parsa said. "So I'm being replicated?"

"Not in that sense. You are being upgraded. In Niyaee City, education means *intelligent rewriting*—not merely learning."

Parsa slowly stepped back.

"Rewriting? So something in me is going to change again?"

He remembered the raw memory. The previous versions. The unanswered question that still echoed within him:

Which version is truly me? The one I am—or the one the city wants to build?

At this moment, the central conflict took shape.

Parsa must learn how to preserve an **independent identity** within a system that equates education with rewriting.

This balance between *adaptation* and *self-definition* becomes one of the story's core axes. In the system of Niyaee City, education is not merely a tool for

transmitting knowledge; it is an instrument for synchronizing minds with the structure of collective identity. And Parsa—having touched raw memory—is now far more sensitive to this synchronization.

One of the cores stabilized into a distinct form: a perfect hexagon, transparent and trembling, like a drop of time. A bodiless, genderless, directionless voice filled the hall:

“Parsa… current version. Welcome to the educational colony. Initial assessment begins.”

Parsa turned to Mina.

“Is it… talking to me right now?”

“Yes.”

“How does it know who I am?”

“From everywhere within you,” Mina said. “From the rhythm of your thoughts to the warmth of your skin.”

The core’s voice returned:

“Are you ready?”

Parsa hesitated.

Inside him, everything was turbulent—but his voice was firm, clear, and unshakable.

“Yes… I’m ready.”

The light of the core began to pulse, like a heart initiating a conversation.

Initiation of the Evaluation Mechanism

The initial assessment marked Parsa’s first direct encounter with the *Path Selection System* of **Niyaee City**—a system that does not rely on classical examinations, but instead decides through the reading of the mind, emotional responses, and the deep internal patterns of personality.

From this point onward, Parsa would no longer simply *learn*; he would be placed under the lens of a structural intelligence—one that sought either to guide him toward his optimal path… or perhaps to control him.

The light of the core spread through the space like a calm wave. Parsa felt that the light did not merely touch his eyes, but probed the invisible layers of his mind—not violently, but with a kind of geometric curiosity.

The voice of the core spoke—not as words, but as

thoughts arriving from inside the ear:

“Parsa… current version. To begin the evaluation, you must enter the cognitive chamber.”

Before him, the floor turned transparent. From its depth, a luminous elevator emerged—neither metallic nor mechanical, but something closer to a standing veil of coherent light, permitting passage.

Parsa cast a brief glance toward Mina.

“So I have to go… alone?”

“Yes,” Mina replied. “The initial assessment is personal. No second mind should interfere with the core’s readings.”

“And you’re sure… this process is safe?”

Mina hesitated—not the kind of pause that hides the truth, but the kind that delivers truth without shattering the listener.

“Safe… for someone who is prepared to see themselves.”

The sentence settled into Parsa’s mind like a trembling silence. He stepped into the chamber of light. The glow

gathered around him like warm skin, without burning.

And suddenly—everything vanished.

The hall. Mina. The cores.

All gone in the blink of an eye.

Parsa's entry into the cognitive chamber was a profoundly narrative act.

This chamber was not a physical space, but a structure designed to reflect the inner self and test decision-making patterns. In many future-oriented systems, evaluations are external—but **Niyaee City** operates differently:

Here, *knowledge* is equivalent to the *ability to confront oneself*.

The cognitive chamber is where an individual stands before their possible selves—versions the city might prefer them to become… or versions the city fears.

Parsa felt as though he were falling—not physically, but mentally. A descent into the mind, like entering an extraordinarily deep dream where one awakens from within while the eyes remain closed.

Gradually, images formed.

Not on a screen.

Not outside.

From within.

He saw himself standing in a space he could not define as either *memory* or *possibility*.

A neutral space—white, shadowless. And at its center, a chair. On that chair… sat Parsa. Or a version of him.

Parsa stepped forward. The seated version lifted his head. The face was identical, but the gaze carried something between fatigue and knowledge.

He spoke:

“So… you finally arrived.”

Parsa froze.

“Who… are you?”

The seated version replied:

“I am who you *could* be… if the city allowed it.”

Parsa swallowed.

“You’re… my raw version?”

The version smiled bitterly.

“No. I’m not raw. I’m the version you might have become… if your past hadn’t been erased.”

Parsa’s mouth went dry.

“So you’re… me, from a previous version?”

“Not exactly. I am your *possibility*. Something suspended between past and future. Something **Niyaee City** has always tried to prevent.”

Parsa stepped back.

“Why? Why would it prevent you?”

The version answered calmly:

“Because I am autonomous. And autonomy, within the collective equilibrium of Niyaee City, is considered a defect.”

In an urban structure like Niyaee City—built upon collective synchronization—each individual must move along a predefined optimal path. Versions that point beyond the path—versions of possibility,

freedom, creative deviation—are dangerous to the system.

In this moment, Parsa was not merely facing a mental image, but confronting his *suppressed potential*. A potential that was both a warning to the city and a source of power for him.

The seated version continued:

“Do you know why you’re so confused?”

“Because part of you still doesn’t know what was taken from you.”

Parsa whispered:

“What… was taken from me?”

The version raised a finger to his temple.

“Direction.”

“You remember *how* you think, but not *why* you think that way.

You understand your emotions, but not their roots.

You have dreams… but not their origin.”

Parsa felt the ground beneath him dissolve.

“So I was… severed?”

“More precisely,” the version said,

“you were *reassembled*.”

Parsa trembled.

“What does reassembled mean?”

The version smiled.

“It means **Niyaee City** removed the parts of you that didn’t fit the colony’s structure… and rearranged what remained.”

Parsa felt his breath quiver.

“So I’m… incomplete?”

“No,” the version replied. “You are *shaped*. Not incomplete—but not fully yourself either.”

Parsa murmured:

“And you… are the part of me that’s complete?”

The version laughed softly.

“No. I am only one of the paths you could have taken.”

A dangerous path.

An unpredictable path.

The path of *identity*.

“Niyaee City,” he continued, “has always feared humans who are too… free.”

Parsa asked a single word, filled with fear and curiosity:

“And… can I become you again?”

The seated version tilted his head.

“If you choose to. But every choice has consequences, Parsa. Choosing freedom means stepping beyond the roles the city has prepared for you. And that choice… always has a price.”

Parsa asked:

“What price?”

The version answered:

“That **Niyaee City** will classify you as *incompatible*.”

“And when that happens… you will either be reassembled again—or replaced.”

Parsa whispered:

“Mina said that too…”

The version leaned forward.

“Then listen carefully. This is your first true test:

Do you want to be the city’s optimized version…

or your real self?”

The white chamber trembled.

And the evaluation began.

Parsa now stood at a decisive threshold between two paths:

The path of synchronization—keeping him within the structure of **Niyaee City**.

The path of independence—leading him toward a fuller form of being… but in conflict with the system.

Here, the story moves beyond the city and its technologies, entering a deeper phase:

the confrontation between the human and their suppressed selves.

The Unveiling of a World Long Concealed

The next morning, when Parsa rose from the residential layer, the mist-laced light of **Niyaee City** lay over space like a silver veil, as though the city's layers had not yet fully awakened from their systematic nocturnal sleep.

At the center of the layer, the Field of Memory pulsed with its hexagonal lights, each flicker like a heartbeat—one that did not belong to any human being, but to the entirety of **Niyaee City** itself.

Parsa moved slowly along the spherical pathways, sensing that the ground beneath his feet felt softer today—more flexible, more alive than ever before.

He had neither forgotten the experience of the previous night—the passage through the Gate of Raw Memory—nor could he translate it into words. That encounter had formed a new layer within his mind, a structure whose full logic he had yet to grasp.

At that moment, Mina's voice echoed around him—this time not from directly ahead, but through the

ambient audio system of the layer.

“Parsa, are you ready? Today you enter the Colony. A place where every lesson, every skill, and every choice will shape not only your future, but a part of **Niyaee City** itself.”

In **Niyaee City**, the colonies are not merely educational centers; they are crucibles of destiny. The city’s architecture is designed so that learning, choice, and skill exert a direct influence on its future structures. For this reason, entering a colony is tantamount to entering the “main current of the future.” For new citizens, this moment carries ontological significance.

Parsa stepped toward the colony’s entrance hall.

The doors were two vast, transparent wings, their surfaces alive with moving patterns of stable form—patterns that shifted moment by moment like living thoughts. As he approached, the doors parted gently, revealing a soaring hall within.

Vertical lights, like columns of glass, extended from ceiling to floor, gleaming softly. At the center of the hall hovered a calm ring of blue light. Mina appeared—this time in a completely transparent form, unlike the

night she had accompanied him into the depths of memory.

Parsa asked with quiet curiosity,

“So… this is the beginning?”

Mina replied with a faint yet meaningful smile:

“This is the Layer of Decision. Before entering the Colony, you must decide how you will continue within **Niyaee City**. The colonies will lead you toward different skills, but you cannot rely on a single path. **Niyaee City** seeks balance. You must advance along several paths, interwoven.”

Here, **Niyaee City** articulates the concept of multi-path existence. Unlike conventional models that funnel humans into a single specialization, the city asserts this principle:

Human identity is not linear.

The colony system is not based on dividing the world, but on states of cognition. For this reason, the protagonist—Parsa—must grow along multiple paths simultaneously.

Mina raised her hand, and suddenly three vast

holograms appeared before Parsa.

The first hologram revealed a world of structures, equations, and geometric spaces.

Mina said, “This is the Colony of Mental Architecture. Here, you learn how to build, modify, combine, and give meaning and direction to cognitive structures.”

The second hologram displayed networks of human connections and interpersonal interactions—lines intertwining like living roots.

“This is the Colony of Interaction and Behavior,” Mina continued. “The heart of **Niyaee City’s** society. Here, you learn how collective behavior forms and how you can play a role within systems larger than yourself.”

The third hologram depicted a realm of materials, industries, energies, and shifting physical spaces—like a living machine in constant metamorphosis.

“And this,” she said, “is the Colony of Technique and Structure, where the skills of building, creating, and leading projects take shape.”

These three colonies stood like three great poles. Each could have been a complete world on its own, yet

Niyaee City regarded them as equally essential and inseparably intertwined.

Parsa stared.

“Do I have to choose just one?”

“No,” Mina answered. “You must choose your own combination.”

This is a pivotal moment in the narrative. **Niyaee City** does not force individuals into a single path. It demands an understanding that choices form networks, not lines. This structure will later give rise to profound conflicts between refined identity and raw identity.

Parsa walked slowly before the holograms. Their light fell across his face—the blue of the first, the golden glow of the second, and the silver sheen of the third.

In a soft voice, he said,

“These aren’t just skills… they’re three ways of being.”

Mina nodded.

“Exactly. And you must determine your dominant *state*, not your dominant path. The colonies will then adapt their teachings to your state.”

Parsa closed his eyes. The raw memories of the previous night flooded his mind. He saw himself running, building small things, striving to understand the complexity of others' behavior, imagining the hidden patterns of the world.

When he opened his eyes, his first words sounded like a confession:

"I've… never had a single, fixed path."

Mina smiled gently.

"That is precisely why **Niyaee City** chose you."

Here, a transformation occurs within Parsa. He shifts from someone seeking "the one correct path" to someone who must *design his own composition*. This moment marks the beginning of his awareness as a multilayered identity.

Parsa stepped forward and stood between the three holograms. Three beams of light converged upon him, and his shadow split across the floor into three fragments, as though three different versions of him were waiting along three distinct paths.

He took a deep breath and said,

“I want… all three paths.”

Mina replied,

“All citizens want all paths. What matters is the *ratio*. Your ratio shapes your identity.”

Parsa hesitated, then raised his hand as his gaze moved among the lights:

“Mental Architecture: 55%

Interaction and Behavior: 25%

Technique and Structure: 20%”

The lights shifted in response to these proportions, and suddenly the blue ring at the center of the hall ignited. At that moment, Mina offered a concise analysis:

“Your ratio indicates a mind adept at constructing large, complex structures;

yet you do not drown within them, because 25% interaction keeps you connected to society;

and 20% structure enables you not only to think, but to *build*.”

She continued:

“This is a progressive composition. Mental architecture draws you toward analyzing macro-patterns; interaction and behavior guide you toward understanding people; and technique and structure allow you to realize your visions in the physical world.”

After a brief pause, Mina added,

“This combination has only one implication: you are not meant merely to learn—you are meant to *design*.”

At that instant, the entire hall transformed. Lights converged, walls unfolded, and thousands of luminous pathways rose from the floor.

“From this moment on,” Mina said, “you enter the educational colonies of **Niyaee City**. All your learning, projects, and even your interactions with others will be calibrated according to this composition.”

Parsa asked,

“So what’s the first step?”

Mina answered softly,

“The first step is entering the foundational classes—but not as a student…”

She paused.

"…as someone who must learn how to *see*."

Parsa stepped forward as the luminous gate before him opened. As he passed through, his eyes closed for a brief moment—not from the intensity of the light, but from the emotional wave that washed over him.

The gate flowed like a river of living energy alongside his body. When he opened his eyes, he found himself in a corridor unlike any other in **Niyaee City**.

The walls were surfaces of calm, shifting light—brightening and dimming in a steady rhythm, like the breathing of a vast organism. The floor was clearer than water, yet firmer than any industrial alloy.

With each step Parsa took, a circular wave rippled outward beneath his feet, traveling a few meters before dissolving into the luminous walls.

He murmured to himself,

"This place… is alive."

Mina appeared beside him and said,

"This is the Corridor of the Awareness Layer. Before

entering any colony, you must pass through here. This space tunes your mind—not by erasing it, but by refining its capacity to receive."

The Corridor of the Awareness Layer is not merely a physical passage. It is a semi-mental space—a place where the systems of **Niyaee City** synchronize the rhythm of an individual's mind with the rhythm of the environment itself.

Until now, Parsa had been merely a viewer; now, he was about to become an observer—and in the educational philosophy of **Niyaee City**, the distance between these two is immense.

At the end of the corridor, a vast space opened up. Yet it did not resemble a classroom. There were no chairs, no desks, no holographic board. At the center of the space hovered an immense circle of light.

Around it, transparent layers of varying heights were arranged in precise rings—like a monumental platform designed not for sitting or standing, but for *seeing*.

Parsa gazed toward the center. Within the luminous ring, images appeared—but not clearly, not completely. Scenes from **Niyaee City**, fragmented, blurred,

sometimes inverted. As if someone had shattered the world and reassembled it again, leaving a few pieces still misaligned.

Parsa asked,

“Is this… my first class?”

Mina replied,

“Yes.”

“But… there’s no one here.”

“This class has no instructor. Because the first thing you must learn cannot be taught by anyone else.”

Parsa said in surprise,

“What is it that I have to learn?”

Mina answered calmly,

“To see. Not merely to look.”

Parsa stepped into the ring of light. The moment he entered, the images sharpened.

He saw:

– The streets of **Niyaee City**, but with shadows that

seemed displaced—shifted a few moments into the future or the past.

– Hexagonal towers that rotated in one instant, only to stand completely still in the next.

– Patterns of human behavior repeating themselves, yet never identically—smaller, larger, or incomplete versions emerging in succession.

Parsa tilted his head and said,

“Why does everything feel so… broken?”

Mina replied,

“Because no one can see the world all at once.”

She paused.

“These images are raw, compressed versions of urban information. They are your surface-level impressions of behaviors, structures, and patterns that have always surrounded you… but which, until now, you did not truly *see*.”

Parsa extended his hand. When his finger touched one of the images, a fragment shifted and reformed into a new configuration—as if he had stirred the mind of the

world itself.

“This… isn’t real, is it?”

Mina answered with deep calm,

“It is not.”

“Then what is it?”

“The reflection of reality within your mind.”

She continued,

“And until you recognize the reflection, you cannot analyze reality itself. Education in **Niyaee City** does not begin from the outside; it begins from within.”

In one of the images, Parsa saw a man walking along the street—his movement calm and assured. In the image beside it, the same man appeared anxious, tense, unstable. And in a third image, that same man was smiling, unburdened, as if caught in a moment of joy.

Parsa said in shock,

“Are these… three different people?”

Mina replied,

“No.”

“Then how—?”

“These are three *perceptions* of the same man. One formed during your fatigue, one during your anxiety, and one during your hope.”

Parsa exhaled slowly.

“So… the world… depends this much on our perception?”

“Yes,” Mina said.

She paused.

“And this is the first lesson of the colonies: you do not see the world as it is; you see it as *you are*.”

Parsa felt the sentence enter his mind—but it did not remain on the surface. Something shifted within him: a new layer, an initial understanding, a small awakening.

Mina said,

“Now it is time to practice.”

“Practice?”

“Yes. You must reconstruct one of these fractured images. Not based on what you *think*, but on what is *true*.”

Parsa looked at the images.

All of them were vague, fragmented, unstable.

He was being asked to repair something whose complete form he did not yet know.

Mina continued,

“All new citizens undergo this exercise.”

“It seems difficult.”

“It is not difficult… if you have learned how to *see*.”

Parsa chose the image of the man. Three versions of the same figure floated side by side.

He said softly,

“I need to understand… what’s original.”

Slowly, he raised his hand and began to align the fragments. Moments later, a middle-aged man appeared—his face neither smiling, nor anxious, nor serene. His expression was human in the truest sense: a

synthesis of different moments, different emotions, different conditions.

Parsa whispered,

“This… this is real.”

Mina said calmly,

“Well done. You have passed the first stage: correcting the error of perception.”

Stabilization of the Image and the Tremor of the World

Parsa remained fixed on the reconstructed image. The man was no longer a trembling shadow, no longer an exaggerated projection of Parsa’s fleeting emotions. He now stood complete—not complete in detail, but complete in truth. Parsa felt something shift in the surrounding space; not the air, not the light, but the system itself. It was as if **Niyaee City** had sensed this small but meaningful change in his perception.

Mina said,

“Did you feel the vibration?”

“Yes… what was that?”

“When someone looks at reality *without mental filters* for the first time, the layer of awareness reacts. The reaction is subtle—but real.”

Parsa could clearly feel a faint tremor beneath the transparent floor, as if somewhere deep within the mental infrastructure of **Niyaee City**, a vast presence had stirred.

Niyaee City is not merely a technological metropolis. It possesses a layer of *awareness*—one that responds to the perceptions of its citizens. This system, delicate yet effective, tracks cognitive growth. Here, human perception and intelligent structures evolve together in a shared cycle.

While Parsa was still absorbed in the image, the sound of footsteps echoed behind him. He turned. Three students entered the space. Their clothing carried a blend of the three colony colors:

Blue (Architecture of Mind),

Gold (Interaction and Behavior),

Silver (Technique and Structure).

More striking than the colors, however, were their

faces. They were neither indifferent nor overly curious. Calm, focused, contemplative—each of them seemed to be here by *conscious choice*, not obligation. One of them stepped forward. A boy with gray eyes shimmering in the ring's light asked, in a tone balanced between respect and curiosity:

"Are you new as well?"

Parsa replied,

"Yes… I just completed my first exercise."

The boy glanced at the reconstructed image. His eyes narrowed slightly.

"Good. Very good. Most newcomers on the first day only mix the fragments."

Mina explained,

"He has passed the first stage of *seeing*."

The other two students—a girl with short dark hair and a tall, quiet boy—stepped closer. The girl said,

"My name is Soha."

The tall boy said,

“I’m Peyman.”

And the gray-eyed boy said,

“I’m Karen.”

They looked at Parsa. Slightly hesitant, but steady, he replied,

“I’m Parsa.”

Soha smiled—a warm smile, but not a superficial one.

“Welcome to the Layer of Awareness, Parsa.”

The arrival of Karen, Soha, and Peyman marks the beginning of a new chapter in Parsa’s path. These three will become key figures in shaping his identity and future projects. Each represents a *counterpoint* to Parsa:

– Karen: the intense analyst;

– Soha: the intuitive and relational thinker;

– Peyman: the calm, precise builder.

This triad complements Parsa’s mental structure—precisely why **Niyaee City** brought them together at the same moment, in the same class.

Mina said,

“Now all of you must talk about perception. Not to find the correct answer, but to understand how your perspectives differ.”

Karen pointed to Parsa’s image.

“Why did you choose this version?”

Parsa replied,

“Because it felt closest to a real human being. Not exaggerated. Not distorted.”

Karen nodded thoughtfully.

“So you’re seeking the *median of truth*.”

“What does that mean?” Parsa asked.

Soha explained,

“It means you have a sense that balances extremes. In **Niyaee City**, this skill is highly valued, because most people gravitate toward one pole or the other.”

Peyman, speaking softly, added,

“You were able to reconstruct the image because you

looked from the *second layer*."

"The second layer?"

"Yes. The first layer is pure emotional reaction. The second is structural perception. You moved directly to the second layer—without being taught."

Parsa paused. The words felt heavy, yet familiar—as if these ideas had always existed within him, unnamed until now.

Mina said,

"These small differences will shape your paths. Observe how each of you looks at the same thing, yet draws different meanings. These differences form your *professional identities*."

At that moment, the ring of light at the center of the space shifted color. Gold and blue intertwined, and a new image appeared.

Four fragmented versions of a single scene:

Four students in the near future, working on a shared project. But each version was different:

The first: success and shared joy.

The second: conflict and confusion.

The third: intense focus and relentless effort.

The fourth: project failure.

Parsa said in astonishment,

“What are these…?”

Mina replied,

“Your first interdisciplinary project image.”

“So… the future?”

“It is not the future.”

“Then what is it?”

“Possibilities. These are versions that may occur, depending on how you collaborate.”

Karen stepped forward and said quietly,

“So the future begins forming right now.”

Soha said,

“And it depends on how we see.”

Peyman said,

“And on how each of us structures.”

Parsa looked at all four images. Slowly, he sensed that among all these possibilities, one path was clearer than the others—though he still could not name it.

Mina said,

“This was only an introduction. Your real project will begin later. But you must understand this from now on: no one in **Niyaee City** completes a project alone.”

Parsa looked at the other three. For the first time, he felt that perhaps they were truly his companions on this path.

Soha smiled.

“Looks like we need to get to know each other well.”

Karen said,

“And understand how each of us sees.”

Peyman said,

“Because every difference is an ability—not a problem.”

Something lit up inside Parsa—

a small but significant feeling: *initial trust*.

The light of the ring shifted. A new corridor opened on the eastern side of the space. Its color was silver-blue, pulsing slowly with a steady rhythm.

Mina said,

“Now it is time for the second stage.”

Parsa asked,

“What is the second stage?”

Mina replied,

“Seeing the outer world.”

She paused.

“But this time, with calibrated eyes.”

Parsa and the other three stepped toward the new corridor.

The next morning, when Parsa awoke, **Niyaee City** was breathing.

Soft hexagonal lights gradually illuminated the ceilings of the dormitory layers—just as if the city itself had

awakened before its inhabitants and was gently easing them out of their dreams.

Parsa opened his eyes and, for a moment, imagined he was still within the layer of raw memory, with unfamiliar shadows circling around him. But upon hearing the gentle voice of the *wake-up system*, his body relaxed.

The system said:

“Student Parsa, today is your first day entering the educational colonies.

Your path is ready.”

The System as Identity, and the Threshold of Becoming

In **Niyaee City**, the system is not merely a mechanical apparatus; it reflects a fragment of each individual’s identity. Every *address* spoken by the city reminds a person of their social role. Naming someone is a form of identity stabilization—a confirmation of existence.

Parsa slowly sat up, placed his hands on his forehead, and murmured,

“Today… this is my real beginning.”

And unlike all the previous days of his life, this sentence was not a slogan, but a belief—a belief born from his encounter with raw memory.

The dormitory had not fully awakened yet, but the transparent corridors were already prepared. Parsa stepped onto a pathway that moved automatically, carrying him toward the central sector of the educational layer.

Beneath his feet, shifting lights flowed like luminous veins—as if **Niyaee City** were revealing its own bloodstream. Along the way, figures emerged from the dormitories: students wearing simple hexagonal garments, their colors marking their specializations:

Blue for analysis;

Green for bio-forms;

Orange for construction engineering;

and White—the rarest—belonging to the field of *psycho-architecture*, the very domain Parsa did not yet understand, yet felt instinctively drawn toward.

Some glanced at him with curiosity. Parsa still could not tell whether those looks came from simple interest

or from a *knowledge* he himself did not possess. For in **Niyaee City**, others sometimes know more about you than you know about yourself.

This city is built upon the registration and refinement of data. Looks are never simple; behind every gaze lies a collection of interpretations, scores, and behavioral probabilities. That is why even the simplest glance carries weight.

At the end of the path, the corridor released Parsa into the central plaza of the colony. The plaza was a vast hexagonal space, its ceiling layered and glowing with a pale, mist-like light.

Students moved in coordinated groups—harmonized not by force, but by algorithms embedded within them since childhood.

Parsa felt like a point of disorder within this order. And that feeling did not frighten him; it made him feel more alive.

At the center of the plaza stood a towering structure:

the **Mother Colony Tower**—the place from which all specializations, behavioral guidance, and mental classifications were regulated. Mina appeared from the

right side of the plaza, dressed in white. For a brief moment, Parsa held his breath.

Not because of her beauty.

Not because of her presence.

But because Mina always seemed two steps ahead of him—even in moments when he believed himself alone.

“Are you ready?”

Mina said this gently—not like a mentor, but like someone checking whether Parsa still recognized his own capacity.

Parsa replied,

“I don’t know if I’m ready… but I want to continue.”

In **Niyaee City**, *readiness* has no fixed definition. When someone says “I am ready,” their mental structural signals are usually already analyzed by the system. But Parsa had chosen the raw path. This time, he was entering the experience without system confirmation—and that made him a *positive anomaly*.

Mina raised her hand, and a virtual space unfolded

before Parsa. Several luminous hexagons appeared, each representing a colony:

The Colony of Predictive Analysis,

The Space–Structure Colony,

The Bio-Architecture Colony,

The Future Behavior Colony,

The Psycho-Architecture Colony,

The Neural Core Connection Colony.

Light revolved around these hexagons, each seeming to speak to Parsa in its own language. He whispered,

“This… is far more than I imagined.”

Mina replied,

“**Niyaee City** never presents the surface layer people see as the ‘whole.’ We have many layers. Most citizens move only within the second and third layers. But you… today, you are entering the seventh.”

Parsa froze.

“The seventh? That means—”

“It means a place where the structures of the human mind and the city become one.”

The seventh layer of **Niyaee City** is where the *human* is no longer part of the city; rather, the *city* becomes part of the human. This layer is rare, accessible only to those with the permission—or the capacity—to enter.

Mina stepped forward, and the immense gates of the Mother Colony Tower opened. The gates were neither wooden nor metallic, but made of a translucent substance through which the city’s internal energies flowed. As they entered, Parsa felt time slow.

Not truly slow—but his mind reduced its perceptual speed under the weight of information. The interior hall spiraled upward, each spiral leading toward a different colony.

Mina said,

“This place is not only for choosing paths; it is for recognizing yourself. Each colony connects to a part of your mind. That’s why you must be careful—your choice is not merely academic. It is your cognitive destiny.”

Parsa asked,

“What if I choose the wrong path?”

Mina paused.

“In **Niyaee City**, a ‘mistake’ occurs only when a person walks a path their mind cannot endure. A wrong choice creates behavioral pressure, repeated errors, and eventually the gradual erosion of identity.”

Parsa felt a faint shiver.

“Then… I have to choose correctly.”

Mina said softly,

“Or at least… choose honestly.”

Here, the philosophy of **Niyaee City** becomes clear: it is built upon *cognitive alignment*. A person moving along a path misaligned with their mind experiences *identity erosion*—a slow fading.

A transparent platform rose before Parsa, and Mina said,

“Before official entry, you must pass the Openness Test. It does not define who you are; it shows how ready you are to see yourself.”

Parsa stepped onto the platform. Suddenly the air cleared, the lights shifted, and something like mist swirled around him. Moments later, voices emerged from within the haze:

His own voice… in different versions.

Him in anger.

Him in fear.

Him in passion.

Him in failure.

Parsa felt as though this multitude of selves was suffocating him.

One version said,

“You are not ready. Go back.”

Parsa shouted,

“No! I… I don’t want to go back!”

The mist trembled. The lights intensified. Another voice, calmer and deeper, spoke:

“If you continue, nothing will ever be the same.”

Parsa gasped,

“I know.”

This test reveals how capable an individual is of facing their *multiplicity of identities*. In **Niyaee City**, identity is not singular; it is a spectrum of behavioral possibilities. The capacity to confront these possibilities is the measure of cognitive maturity.

Moments later, the mist withdrew, and the platform beneath Parsa emitted a cool light. Mina smiled gently.

“You passed.”

Parsa said, his eyes slightly wet,

“That was… harder than I thought.”

Mina replied,

“And gentler than what you will face next.”

The Hall of Choice in the Niyaee Educational Colony

After passing the Test of *Openness*, the atmosphere inside the Mother Colony Tower shifted. Silver-hued lights descended from the ceiling, illuminating the

main hall—an endless space with glass floors through which the layers of **Niyaee City** could be seen plunging into depth.

Parsa felt as though he were standing upon infinite mirrors—mirrors that did not reflect his physical form, but the possible outcomes of his future. Mina stood beside him and said:

“This is the Hall of Choice, Parsa. Every path reveals its own probability to you.”

“So… I’m seeing my futures?”

“No. You’re seeing the city’s *interpretation* of your futures.”

The distinction was crucial. In **Niyaee City**, the future is not an absolute event; it is the city’s *statistical–cognitive interpretation* of an individual’s probable behaviors. The city never predicts the future—it evaluates how you might respond to defined situations and constructs a map accordingly.

A blue light emanated from one of the hexagons: the Analysis Colony.

As Parsa approached, translucent images appeared:

Parsa seated behind a hexagonal desk, engulfed in torrents of data.

Parsa guiding streams of cognition.

Parsa forecasting the collective behavior of a district in **Niyaee City**.

But the final image trembled. A version of Parsa struggled to breathe, bent under the crushing weight of excessive data.

Parsa whispered,

“That… that’s me?”

“One of your possible versions on this path,” Mina replied. “Your mind has analytical power—but endurance matters too.”

“So if I enter this colony, I could… break?”

“If your identity isn’t aligned with the path, yes.”

The philosophy of **Niyaee City** is founded on *capacity–path alignment*. A person with high analytical ability but insufficient mental resilience experiences *cognitive saturation*—a form of informational suffocation in which identity slowly dissolves.

Parsa stepped back.

“No… this path doesn’t feel liberating.”

“Then let’s move on.”

Green light flooded the hall. Images of spiraling plants, living structures, and classrooms bathed in organic light formed around them.

Parsa saw himself:

Inside a laboratory filled with living forms.

Altering the genome of structures that kept buildings alive.

Standing beside a mentor who resembled a tree–human hybrid.

Parsa exhaled softly.

“This… this is beautiful.”

“And difficult,” Mina said.

“But I feel calmer here.”

“This path offers you calm. The question is—do you settle for calm, or are you searching for something

beyond it?”

Parsa fell silent.

He knew his inner forces wanted more than mere adaptation. He was searching for understanding.

Parsa belonged to the *Layer-Seeking Explorer* type—a rare profile found in only 2% of **Niyaee City’s** population. Such individuals do not remain long in tranquil paths; their minds constantly seek the deeper, hidden layer.

“It’s beautiful,” he said at last, “but it feels limiting.”

“Then let’s see the next.”

Orange light emerged. Images of construction, geometric design, and vast projects covered the walls. Parsa saw versions of himself:

Building bridges controlled by mental waves.

Standing atop self-healing structures.

Designing an entirely new layer of **Niyaee City**.

But the final image was empty. Parsa sat alone in a room, devoid of creative flow.

“What is that?” he asked.

“It shows that your creative mind cannot remain confined within rigid structures for long.”

“So my creativity dies?”

“If the path doesn’t reflect your inner reality—yes.”

In **Niyaee City**, the death of creativity is among the most dangerous forms of damage. The city lives through the creativity of its people. When a creative mind is trapped in fixed structures, *innovation blackout* occurs—a loss that harms not only the individual, but the city itself.

Parsa shook his head.

“This path isn’t mine.”

Golden light enveloped the hall. Images of collective behavior, real-time human analysis, and ethical controls appeared. Parsa saw a version of himself guiding groups of students, predicting social behavior, adjusting public decisions.

But another version…

Manipulating. Steering people toward his own desired

outcomes rather than theirs.

Parsa shuddered.

“This is dangerous.”

Mina looked at him deeply.

“Anyone who enters this colony must face the temptation of power.”

“And I don’t want power.”

“You already have power, Parsa—whether you want it or not.”

“But I don’t want to abuse it.”

This was the first time Parsa unconsciously revealed his *ethical dimension*. **Niyaee City**, despite its appearance, places immense importance on behavioral ethics. An influential individual without ethics becomes a threat to the city itself.

Mina said quietly, with restrained approval,

“Understanding power means you might also be able to control it.”

Still, Parsa did not accept the path.

“Next.”

White light—the rarest of all—filled the hall.

Everything changed.

The hall became not merely brighter, but *more alive*. Parsa felt the very breath of the space shift. There were no versions of himself on the walls—only his *mental states*, appearing as floating waves and lines:

Parsa in deep contemplation.

Parsa facing truth.

Parsa within the layers of his own mind.

Parsa reconstructing the mental architectures of others.

Parsa whispered,

“What… does this mean?”

Mina replied softly,

“Psycho-architecture means building and rebuilding minds. Understanding human layers. Seeing what others cannot see.”

Parsa felt his heart race. Of all the paths, this one

resonated most deeply within him.

Mina continued,

“This is the heaviest path.”

“Why?”

“Because you enter other people’s minds. You see parts even they cannot see.”

“And if I make a mistake?”

“A mind may collapse entirely.”

Parsa paused.

Psycho-architecture is the ninth layer of **Niyaee City**—a realm only those with exceptionally rare profiles can enter. On this path, one does not design physical structures, but the mental architectures of human beings.

“But…” Parsa said slowly, “this path feels like finding a missing piece of myself.”

With a calm rarely seen, Mina replied,

“Because this path has always been active within you… the city was simply waiting for you to see it.”

Parsa looked at the white light. It was the only path that both terrified him and pulled him irresistibly toward himself.

Softly, he said:

“This path… is me.”

When Parsa placed his hand upon the white light, a narrow doorway opened at the heart of the hall—a door unlike any ordinary entrance, bearing no resemblance to the grand gates of the towers of **Niyaee City**. It opened silently and gently, more like the lifting of an eyelid than the parting of a door. Parsa stepped inside, and the air grew noticeably cooler.

The white light was neither sharp nor cold; it carried a soft luminosity, as though it rose from within itself. The walls did not appear white—rather, they were entirely colorless, and this absence of color created a sensation akin to a mask of mental stillness.

Mina followed him and said quietly,

“This is the *Core of Initiation* for psycho-architects.”

Parsa asked,

“Why is it so simple?”

Mina replied,

“Because every complexity must begin within you, not in the environment.”

The Psycho-Architecture Colony, despite its minimalist appearance, is saturated with hidden technologies. This simplicity is intentional. The colorlessness of the space is not a sign of poor design, but an effort to prevent imposed meaning. At the point of origin, the psycho-architect’s mind must be *free of preconceptions*.

Parsa paused and said,

“It feels like I’m entering my own mind, not a classroom.”

Mina answered with quiet satisfaction,

“And that’s the best sign—because psycho-architecture, before being a skill, is an inward confrontation.”

At the far end of the hall stood a transparent platform, upon which a figure was waiting: tall, dressed in white, with a calm face and eyes that did not look at Parsa’s appearance, but into the depth of his being.

Mina whispered,

“That is Master Sayan.”

Parsa asked,

“The head instructor of the colony?”

Mina replied,

“No… the primary instructor of your own mind.”

Before Parsa could grasp the meaning of her words, Sayan spoke in a calm, resonant voice:

“Parsa… welcome. I know you have passed through the Raw Dream. Now you must learn how to guide that dream—without being consumed by it.”

Parsa straightened unconsciously. Sayan stepped forward and continued:

“Psycho-architecture is not easy. You will see the layers of other minds, but the most dangerous part is this: you may discover parts of yourself within them.”

Parsa asked hesitantly,

“Do you mean… I could lose myself?”

“If you are not careful—yes.”

In psycho-architecture, the boundary between *self* and *other* becomes so thin that only minds that are both flexible and coherent can pass through it. Parsa possesses flexibility, but his coherence is not yet complete—and this weakness will shape his first failure.

Sayan raised his hand, and the walls dissolved into waves of light. The floor rippled like a calm lake, and Parsa felt as though he were suspended inside an invisible mind.

“This is the *Hall of Waves*,” Sayan explained. “Here, you learn that the human mind is not a fixed structure, but a continuous flow.”

Parsa asked,

“What are these waves?”

“Mental states. Each wave represents a *cognitive node* within human beings.”

Parsa reached toward one of the waves. It reacted instantly, reshaping itself. Startled, he stepped back.

“Why did it do that?”

Sayan said,

“Because your mind affected the wave. Every thought creates a wave, and every wave shapes behavior.”

This moment reveals one of the foundational principles of **Niyaee City**: the human mind is not merely a receiver of information—it is a constant generator and reflector of it.

Sayan continued,

“Now it’s time for your first exercise.”

Parsa asked in disbelief,

“Right now?”

“Psycho-architecture does not begin with *seeing*,” Sayan replied. “It begins with *feeling*.”

The master opened his fingers, and a luminous wave rose from the ground, forming into a halo shaped like a human figure. Parsa said in astonishment,

“Is that… a person?”

“Yes. The *cognitive pattern* of one of the colony’s students—anonymous. You are not to analyze it. You

are to *feel* it."

Parsa stepped closer. The halo was calm, yet an invisible tremor pulsed within it. As he approached, its color shifted.

"Tell me what you feel," Sayan said.

Parsa closed his eyes, took a deep breath, and listened to the tensions within the wave. Slowly, he spoke:

"This… is an anxious mind. But not from fear. From a sense of not knowing itself."

Sayan nodded with approval—but suddenly the wave intensified, growing brighter, as though something within it was calling to Parsa.

"Oh—this feeling—"

"Step back, Parsa," Sayan said sharply.

But it was too late. The wave surged forward, and within it appeared a blurred image of *Parsa himself*. He recoiled in terror.

"What is that?!"

"A part of you that remains unresolved. You

approached another mind, and that mind reflected your own imbalance back to you."

This moment reveals the first great danger of psycho-architecture: *reciprocal reflection*. When a mind-architect connects with another mind, unstable aspects of their own psyche may be mirrored within the other—and then returned to them.

The wave collapsed abruptly. The white light faded. Parsa fell to the ground, gasping, his heart racing. Mina rushed to his side.

"Parsa! Are you all right?"

"I… I saw myself…"

"I know. This doesn't happen to everyone."

"Why did it happen to me?"

"Because your mind has experienced the *Raw Gate*. You are different from the other students."

Sayan approached calmly and said,

"You did not fail, Parsa. You merely saw your hidden part. But if you cannot master it, entering psycho-architecture may become dangerous."

Parsa asked quietly,

“Then what should I do?”

Sayan offered a brief smile and said:

“You must build your own mind—before you touch the minds of others.”

And this marks the beginning of one of the most difficult stages of Parsa’s journey.

Niyaee City hovered in a moment suspended between light and shadow; as though every stone and surface of the city were breathing, carrying hidden whispers within themselves. After the incident in the lower corridor, Parsa walked slowly yet heavily along a street whose surface calm was merely a veil for the deep restlessness flowing beneath the skin of Niyaee City.

That tension spread through the air like an invisible mist, and Parsa—his mind half-opened and half-afraid—felt it more acutely than most.

Still entangled in questions without clear answers, he suddenly heard Mina’s voice—a voice that usually spoke with certainty, but now carried a subtle tremor.

“Parsa… why didn’t you reply to my message?”

Despite its simplicity, the sentence clawed at the remnants of his mental security. The inner reading of this moment is that Mina is more than an individual here; she carries a branching current of the city's emotional flow, and Parsa is the first point where this wave makes contact.

Unsure whether to trust or withdraw, Parsa said only,

"I… I wasn't sure the message was really from you."

Mina stepped closer. Her presence was both calming and unsettling at once—a contradiction that mirrored Niyaee City itself. Her gaze was direct, yet something indistinct rippled in the depths of her eyes, suspended between plea and warning.

"If it wasn't from me," she asked, "then who could it have been from?"

This seemingly simple question contains a crucial psychological insight: Mina is not merely seeking an answer. Unconsciously, she reveals that in Niyaee City, connections rarely travel through ordinary paths. Like Parsa, she too is entangled in parallel perceptual networks—networks that can make a person appear deceptive even when they speak the truth.

Parsa remained silent.

He could not say that he had felt the message carried not just *information*, but *emotion*—an emotion that seemed to have slipped from another mind and settled into his own.

A moment later, Mina sighed—a sigh too heavy to come from simple irritation.

“You… you left me, Parsa.”

This sentence carried a depth far beyond emotional complaint. An inner analysis reveals that the language of Niyaee City, even within human relationships, is saturated with an intertwined network of psychological effects.

In truth, Mina may not be speaking of literal abandonment. She is speaking of the severing of an *emotional connection*—one she herself does not fully understand how it came into being.

Parsa tried to protest, but his tongue went dry.

Around them, the city slowly grew darker—not because the sun was setting, but because the *intensity of presence* was diminishing. In Niyaee City, light

always follows the mind.

After a heavy pause, Parsa said,

“I never meant to abandon anyone.”

Even to himself, the words were unconvincing, but he had no other path.

The inner reading here is that Parsa still cannot distinguish the boundary between his own decisions and the influence of Niyaee City’s mental currents. He does not know which of his emotions are truly his, and which are reflections of other minds.

Mina did not look away from him.

“Then why did you go back there? Why did you go alone into the lower corridor?”

For a moment, Parsa froze. She knew. Which meant her sources of information went far beyond simple conversation.

Her next sentence carried a concealed urgency:

“Parsa… the lower corridor is not your place. It never was.”

Within these words lies a warning that exceeds concern or affection—an echo of forbidden knowledge or a painful experience Mina cannot speak of directly.

Parsa said quietly,

“But I had to go. It felt like… I needed to see something.”

Mina lowered her head; restrained anger and naked fear rippled across her face.

“You still don’t understand. Niyaee City only shows the truth to those it chooses. And if it has chosen you… the reason isn’t necessarily a good one.”

This sentence, heavy with darkness, carries powerful symbolic meaning: Niyaee City is not merely a place—it is an *agent*; something that selects, shapes, breaks, and transforms.

In this moment, Mina appears more than ever as someone who is both a victim and a bearer of secrets she cannot reveal.

Unsure where to begin, Parsa took a step back. His breathing grew shallow, and his mind began to ripple under the overlap of his emotions and Mina’s.

Suddenly, Mina took his hand.

“Parsa… I don’t want to lose you again.”

Despite its tenderness, the scene carries a philosophical core: in Niyaee City, being lost rarely means physical disappearance. More often, it means being submerged in currents that erode identity. Mina fears losing him because she herself was once lost.

Parsa said softly,

“I’m here. I’m not going anywhere.”

Yet even he was not certain.

Beneath the skin of everything in Niyaee City, a hidden motion flowed—altering decisions, pulling things together or pushing them apart; sometimes with poetic subtlety, sometimes with silent violence.

In that moment, both of them fell into an extended silence—a silence neither comfortable nor heavy, but like the anticipation of a distant explosion. Parsa was the first to break it.

“Mina… what do you know that I don’t?”

Mina closed her eyes, as though opening her mouth to

speak the truth would shatter something inside her.

“One day I’ll tell you… but not now. There are still many things you have to see for yourself.”

With its ambiguity, this sentence confirms a central truth of Niyaee City: knowledge cannot be transferred directly—it must be absorbed through experience.

Parsa could only ask,

“Then… where do I start?”

Mina took a step back and let her gaze dissolve into the shadows.

“From yourself… always from yourself.”

And this marked the beginning of a new stage—a stage that belonged both to Parsa and to **Niyaee City**.

Chapter 3: Final Inference

Niyaee City revealed itself as far more than a simple urban space; it emerged as a living, intelligent ecosystem in which every individual, every movement, and every decision generates waves of direct and indirect effects upon the environment and its inhabitants. As Parsa moved through the hexagonal streets and the Colony Academy, this understanding unfolded gradually yet continuously: learning and living in this city were not linear processes, but parts of a dynamic, self-regulating network in which artificial intelligence, human experience, and social interaction were intricately interwoven.

What Parsa observed throughout his time in Niyaee City made one fact unmistakably clear: transparency, cooperation, and collective responsibility are not merely ethical values, but the foundational pillars of a sustainable scientific and intelligent society. Information, ideas, and individual efforts are distributed throughout the colony as *pollen of knowledge*, and every small action becomes an influential unit within the larger system. Analysis of this structure shows that collective intelligence and artificial intelligence are fused to create a self-

regulating environment—one that transforms errors into opportunities and failures into learning experiences.

From a scientific perspective, Niyaee City stands as a living embodiment of evolutionary algorithms and swarm-based behaviors, akin to those observed in beehives. Algorithms such as *Bee-Route*, *Swarm Decision*, and *AI-Pollen Ranking* are by no means mere management tools; they function as dynamic feedback systems that continuously align individual performance with collective outcomes. These feedback mechanisms—manifested through light, holograms, and shifting pathways—analyze and optimize human behavior in real time. Thus, every person in Niyaee City, through each movement and decision, not only learns but actively shapes the learning of others.

Philosophically, Parsa's experience in Niyaee City revealed that learning is not an isolated individual process, but a fundamentally social and collective one that redefines the boundary between *self* and *community*. Parsa could no longer treat knowledge as something he possessed alone; every action he took carried consequences for other members of the colony. This realization offered a direct, lived encounter with

theories of complexity and dynamic systems—systems in which independent components generate emergent collective behaviors, and whose outcomes can only be understood through the continuous interaction of their parts.

Another key outcome of Parsa's journey was his encounter with ethics and social responsibility within Niyaee City. Unlike traditional environments dominated by competition and isolation, Niyaee City demonstrated that cooperation and transparency not only foster individual growth but also enable the flourishing of the entire community. In this space, individual errors do not remain hidden; instead, they become opportunities for collective optimization and shared learning. This experience closely mirrors the philosophy of organizational learning, in which every member is accountable for the growth and evolution of the whole system.

Parsa's empirical observations also confirmed that artificial intelligence, as a decision-support tool, cannot replace human judgment but must complement it. Even in processes where *Swarm Decision* or *AI-Pollen Ranking* propose optimal pathways, human awareness and critical thinking remain essential for interpreting

and refining the data. This interaction represents a clear example of coexistence between human and artificial intelligence, teaching us that the future of learning and decision-making depends on a careful balance between intelligent tools and human understanding.

Niyaee City further revealed to Parsa that learning is not confined to classrooms or formal institutions; it is a continuous, dynamic flow embedded throughout the entire living environment. Streets, parks, buildings, and urban pathways are intelligently designed to integrate learning experiences and practical activities into everyday life. Analysis of this urban model suggests that the convergence of space, human behavior, and intelligent algorithms can serve as a blueprint for future cities—cities in which knowledge, ethics, and daily life evolve in harmony.

Ultimately, Parsa's central inference was that Niyaee City is a living colony, a place where knowledge, ethics, and individual and collective life circulate within a coherent, dynamic system. His experience demonstrated that true learning acquires meaning only when individuals recognize that their decisions affect not only themselves but the entire community. The final analysis is that Niyaee City offers both a practical

and theoretical model for the design of future intelligent societies: societies in which collective intelligence, technology, and human ethics converge to create a sustainable and creative ecosystem.

Part One: 40 Questions for Thought and Analysis

1. How can the concept of *Niyaee City* be compared with traditional cities?
2. Why is the hexagonal structure of Niyaee City inspired by the honeycomb of bees?
3. How does the *Dance of Knowledge* facilitate the transmission of information?
4. In what ways does the role of a guide differ from that of a traditional teacher in the learning process?
5. Analyze the function of *HiveMind* and its impact on individual learning pathways.
6. What does it mean for errors to be considered learning opportunities in Niyaee City?
7. How does the *Bee-Route* algorithm determine the optimal learning path?
8. Does collaboration in Niyaee City always guarantee individual success? Why or why not?
9. What advantages arise from the interaction between artificial intelligence and human

thinking?

10. How are individual responsibility and collective responsibility integrated?

11. Can the transparency system in Niyaee City create challenges related to privacy?

12. What concepts are symbolized by the green and yellow holographic lights?

13. What lessons can be learned by comparing *Swarm Decision* with traditional voting systems?

14. Why is the learning path in Niyaee City dynamic rather than linear?

15. How do individual errors transform into collective experience?

16. What is the difference between rote learning and participatory learning?

17. Can collective intelligence contribute to ethical decision-making? How?

18. What role does each individual play in preserving and developing the colony?

19. Analyze the impact of the city's holograms on student motivation.

20. Why are cooperation and transparency the keys to sustainable learning?

21. How does the *AI-Pollen Ranking* algorithm assess the quality of ideas?

22. Is there potential for misuse of information within HiveMind?

23. How does hands-on experience in the real urban environment strengthen learning?

24. What does the concept of "learning for all" mean in Niyaee City?

25. What is the difference between managerial and coordinating artificial intelligence?

26. What ethical lessons can be drawn from knowledge aggregation and path correction?

27. Is complete transparency always beneficial? Why or why not?

28. What is the relationship between individual participation and collective productivity?

29. How is Niyaee City an example of complex, self-regulating systems?

30. How do small changes in movement pathways affect the entire system?

31. Is learning in Niyaee City limited to theoretical knowledge, or does it include practical learning as well?

32. What principles underlie the design of an urban learning ecosystem?

33. How do individual and group learning occur simultaneously?

34. Can algorithms replace human critical thinking?

35. What distinguishes traditional systems from Niyaee City?

36. What role does motivation play in collaborative learning?

37. How do experiences of failure transform into collective success?

38. Analyze the effect of colors and holograms on learning path selection.

39. How are ethics and knowledge interwoven in Niyaee City?

40. What is your interpretation of the concept of an "intelligent colony"?

Part Two: 40 Practical Exercise Questions

1. Using the *Bee-Route* algorithm, design an optimal movement path for a hypothetical classroom.

2. Create a hypothetical hologram presenting three different ideas and evaluate their quality.

3. In a group of three, simulate a small knowledge-collection project.

4. Inspired by the *Dance of Knowledge*, represent the information flow of an idea through body movements.

5. Introduce a hypothetical error into a project and design a method for correcting it.

6. Design a scenario in which insufficient collaboration by one colony member has a negative effect, and propose a solution.

7. Use the *Swarm Decision* algorithm to prioritize three hypothetical projects.
8. Draw a diagram illustrating the impact of individual actions on collective success.
9. Practice performing the role of a data analyst within HiveMind.
10. Design a project that reduces energy consumption in a hexagonal school.
11. Simulate how low participation by one individual alters the learning path of the entire group.
12. Transform a “yellow” idea into a “green” one through refinement and improvement.
13. Assume the role of an intergroup liaison in a hypothetical project.
14. Simulate the practical experience of designing optimized green spaces for Niyaee City.
15. Register a human error in the system and analyze its impact on HiveMind.
16. Prepare a role-distribution table for a cross-

sector project.

17. Design student movement pathways to reduce energy consumption by 10%.

18. Analyze how choosing an incorrect path can have long-term consequences.

19. Design a holographic feedback system to track group progress.

20. Practice proposing the best learning path for each member with the help of the *Zanban* guide.

21. Design a group game based on rules similar to the *Dance of Knowledge*.

22. Create a scenario in which optimal cooperation and transparency lead to group success.

23. Simulate how an individual's mistake becomes an opportunity for collective learning.

24. Design a route through hexagonal streets for data collection.

25. Practice the role of a path designer in a real or hypothetical project.

26. Use holograms to show how ideas are transferred between groups.

27. Implement a hypothetical project using three colony algorithms.

28. Draw a diagram illustrating the interaction between artificial intelligence and humans in decision-making.

29. Analyze and optimize the effects of small changes in lighting and heating within a classroom.

30. Design an ethical-experience scenario for resolving conflict among group members.

31. Practice demonstrating how one individual's information affects the entire group.

32. Design a hypothetical real-world urban problem and analyze its solution through the colony model.

33. Predict a collective outcome using the *Swarm Decision* algorithm.

34. Create a holographic representation of the learning path for a cross-sector project.

35. Analyze how collaboration between two groups can produce different outcomes.

36. Design a short daily schedule for a student in Niyaee City.

37. Demonstrate how correcting early errors leads to collective success.

38. Simulate how a low-quality idea evolves into a golden one.

39. Practice showing how socially responsible behavior improves the group's trajectory.

40. Build a hypothetical model of an intelligent colony and simulate the learning pathways within it.
